

Packaging and Packaging Waste Regulation (PPWR)

Packaging Compliance Statement – Supplier Packaging Reused Without Modification

Document No.	QH-02-PPWR-R001
Revision	1.0
Effective Date	9 September 2026
Issued by	OMEC Motors NV

Document status: This is an OMEC Motors NV compliance statement. It is not an EU Declaration of Conformity issued by OMEC Motors NV as packaging manufacturer.

1. Scope

This statement applies to products supplied to OMEC Motors NV in transport packaging which is subsequently used by OMEC Motors NV for onward delivery without modifications that could affect the conformity of the packaging with Regulation (EU) 2025/40 on packaging and packaging waste (PPWR).

Typical packaging within this scope may include:

- wooden transport crates;
- wooden pallets and skids;
- corrugated cardboard packaging;
- protective films;
- cushioning and protective materials;
- strapping; and
- combinations of the above supplied as part of the original transport packaging.

This statement does not apply to packaging newly manufactured or assembled by OMEC Motors NV or to packaging modified by OMEC Motors NV in a manner that could affect compliance with the applicable PPWR requirements.

2. Role of OMEC Motors NV

For packaging covered by this statement, OMEC Motors NV does not manufacture or assemble the original transport packaging. The packaging is received together with the supplied product and is subsequently used for onward transport in substantially the same configuration.

Depending on the origin and supply chain of the packaging, OMEC Motors NV acts as importer and/or distributor within the meaning of Regulation (EU) 2025/40.

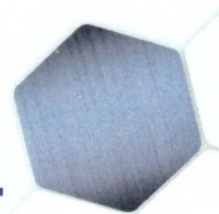

OMEC Motors NV does not issue a separate EU Declaration of Conformity as manufacturer for packaging covered exclusively by this statement.

3. Packaging conformity and supporting evidence

OMEC Motors NV requires packaging placed on the Union market through its supply chain to comply with the applicable requirements of Regulation (EU) 2025/40. Conformity is supported by documentation obtained from the relevant suppliers, manufacturers and/or packaging manufacturers within the supply chain.

Such documentation may include, as applicable:

- EU Declarations of Conformity;
- supplier declarations and packaging specifications;
- material composition declarations;
- test and laboratory reports;

- certificates and other compliance documentation;
- information concerning restricted substances, recyclability and material composition; and
- other technical documentation relevant to demonstrating compliance with Regulation (EU) 2025/40.

Supporting documentation is maintained by OMEC Motors NV within its controlled compliance documentation.

4. Use without conformity-relevant modification

Packaging covered by this statement is used by OMEC Motors NV without modifications considered capable of affecting compliance with the applicable requirements of Regulation (EU) 2025/40.

Normal logistics activities, such as opening the packaging for inspection, handling the packaged product and subsequently closing the original packaging, may take place provided that the original packaging configuration and its relevant compliance characteristics are maintained.

Where packaging is materially modified, reconstructed, newly assembled or supplemented in a manner that could affect its compliance, the packaging is no longer covered by this statement and shall be subject to a separate compliance assessment.

5. Verification and traceability

OMEC Motors NV maintains appropriate records enabling the relevant packaging supply chain and supporting compliance documentation to be traced. These records may include:

- supplier and manufacturer identification;
- purchase order, product and delivery references;
- packaging supplier documentation;
- applicable conformity documentation; and
- other relevant supply-chain information.

Where required by Regulation (EU) 2025/40, OMEC Motors NV shall make relevant information and documentation available to the competent national authorities.

6. Importer and distributor verification

Where OMEC Motors NV acts as importer or distributor, the applicable verification obligations under Regulation (EU) 2025/40 shall be taken into account before the packaging is placed or made available on the Union market.

Where OMEC Motors NV has reason to believe that packaging does not comply with the applicable requirements of Regulation (EU) 2025/40, such packaging shall not be placed or made available on the market until the relevant compliance status has been clarified and, where necessary, corrective action has been taken.

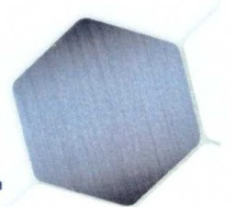

7. Limitation of this statement

This document is an OMEC Motors NV compliance statement and does not replace an EU Declaration of Conformity required to be issued by the responsible packaging manufacturer under Regulation (EU) 2025/40.

This statement is based on the condition that the original supplier packaging remains within the scope of the conformity documentation supplied through the relevant supply chain.

A separate compliance assessment is required where OMEC Motors NV:

- manufactures new packaging;
- assembles packaging into a new packaging configuration;
- materially changes the packaging design;
- substitutes materials in a manner that could affect conformity; or
- otherwise modifies packaging in a way that could affect compliance with Regulation (EU) 2025/40.

8. Statement

Based on the documentation available to OMEC Motors NV and the applicable supply-chain verification, packaging covered by this statement is accepted for onward use on the basis of the conformity documentation provided by the responsible economic operators within the packaging supply chain.

OMEC Motors NV maintains the relevant supporting documentation and shall review the compliance status where changes in packaging, materials, suppliers or applicable regulatory requirements may affect conformity.
